- A. Satisfactorily performs competency independently
- B. Performs competency with assistance or supervision
- C. Has studied and understands competency but needs to practice it
- D. D. Needs to learn and practice competency.

Example:

Analyze the knowledge, skills, and dispositions needed to effectively administer and implement an educational technology or library program within an organization: C

The management class helped me locate local policies, which I use. However, I do not have any for electronic resources so I would like to find out about that. I use the curriculum handbook to help me, and see what gaps occur when class assignments come in. I have not had time to look at emerging technology, and my school doesn't have the money for it. I try to involve the school community in collection development, but don't get lots of input; I would like to know what would be effective.

1. Apply knowledge and skills from coursework to work settings:

2. Demonstrate knowledge of various and complex processes involved in the successful development, implementation, and practice of educational technologies:

3. Explain the role of educational technology and media information within a specific organization:

4. Analyze the knowledge, skills, and dispositions needed to effectively administer and implement an educational technology or library program within an organization:

5. Collaborate with personnel within an organization:

6. Apply ethnographic research techniques to investigate an issue related to the use of educational technology and information:

Additional outcomes for Teacher Librarians:

7. Promote reading for learning, personal growth, and enjoyment.

8. Organize collections according to standard library cataloging and classification principles.
